## Sem-VII/ Data Compression & Encryption / EXTC

QP Code: 2254

(3 Hours)

Total Marks: 100

- N.B.: (1) Question no 1 is compulsory
  - (2) Answer any four out of remaining
  - (3) Assume suitable data if necessary and justify the same.

## 1. Answer in brief:

- (a) Give classifications Data Compression techniques Give an example of each
  - (b) Explain different redundancies in text, digital images and digital videos. How are they important for data compression?
  - (c) Differentiate between private key crypto systems and public key cryptosystems. Give an example of each.
  - Solve the following congruence using Chinese Remainder Theorem (and not by trial-and-error)

 $X \equiv 1 \mod 3$ 

 $X \equiv 4 \mod 5$ 

 $X \equiv 5 \mod 7$ 

2 (a) For the following alphabet and probasilities, find as real valued tag for arithmetic 10 coding, for the sequence a a a a a a a

Letter	Probability		
a <sub>i</sub>	0.2		
a,	0.3		
a <sub>2</sub>	0.5		

- (b) With a suitable example, explain LZ-77 dictionary compression technique. Also explain the worst case in LZ-77 and show how compression ratio is computed in LZ-77.
- 10 3. (a) An alphabet is given with following letters and probabilities. Perform minimum variance i luffman coding. Find the coding redundancy. Also find the compression ratio for the sequence a, a, a, a, a, a, a, a,

Letters	a <sub>i</sub>	a <sub>2</sub>	a <sub>3</sub>	a <sub>4</sub>
Probabilities	0.1	0.3	0.25	0.35

[ TURN OVER ]

QP-Con. 11333-15.

(0)	With a neat block diagram, explain the JPEG lossy compression technique.	10
(a) (b)	Explain DPCM and ADPCM techniques with neat block diagrams.  What are I-, P - and B - frames in digital videos? Explain the principle of video compression used in MPEG standard	10 10
(a)	The prime numbers used in RSA algorithm are $P=19$ and $g=23$ . If the public key e is 3 find $\varphi$ (n) and d; the decryption key where $\varphi$ (n) has usual meaning. Write encryption	10
(b)	and decryption equations.  Explain "Man-in-the-middle" attack happening in Define- Hellman-key exchange system. How can it be avoided?	10
(a) (b)	Give overall block diagram of the DES standard. Explain one round in detail. What are MAC and Hash functions? Give one example of each. Also explain what are the requirements on MAC and Hash functions.	10
Wr	(a) MP-III encoder and decoder (b) JPEG- 2000 standard (c) Viruses and worms	20
	(b) (a) (b) (a) (b)	<ul> <li>compression used in MPEG standard</li> <li>(a) The prime numbers used in RSA algorithm are P=19 and g=23.
