

Duration: 03 Hrs.

Total Marks: 80

Note:

- 1) Q. No 1 is compulsory.
- 2) Attempt any THREE questions from Q No 2 to Q No 6.
- 3) Assume suitable Data wherever necessary.

Q.1. Answer any Four.

(20)

- a) Explain piping geometry factor with its significance in control valve sizing.
- b) Explain ergonomics in brief.
- c) Explain Cavitation with pressure profile diagram.
- d) Explain IP classifications.
- e) Prove that expansion factor is  $2/3$  for choked flow.

Q.2.

- a) Explain Control Room Design Criteria. (10)
- b) Explain bath tub curve with its significance. (10)

Q.3.

- a) Write short note on System engineering. (10)
- b) What are different methods used to increase reliability of the System. (10)

Q.4.

- a) Discuss different methods for abatement of noise in Control valves (10)
- b) Design a  $C_v$  for control valve with following application: (10)

$P_1 = 169.6 \text{ psia}$ ,  $P_2 = 20 \text{ psia}$ ,  $P_{vp} = 20 \text{ psia}$ ,  $C_d = 6.5$ ,  $F_L = 0.73$ , Pipe Size = 3" sch 40

$w = 2,10,000 \text{ lb/hr}$ , sp. weight. ( $\gamma_1$ ) =  $1/0.01683 \text{ lb/ft}^3$ ,  $P_c = 3200 \text{ psia}$ .

Q.5.

- Explain different guidelines for grounding and shielding of equipments. (10)
- Design a  $C_v$  for following application:  
Fluid= Saturated Steam,  $w=63000$  lb/hr,  $P_1=235$  psia,  $P_2=215$  psia , Pipe size= 6"sch 40 ,  
 $C_d=27$  ,  $X_T=0.25$ . (10)

Q.6.

- Explain absolute method of Thermocouple calibration. (10)
- Explain control room design and layout. (10)
