Paper / Subject Code: 53301 / Design of Mechanical Systems

4-Dec-2019 68438 1T01418 - B.E.(MECHANICAL)(SEM VIII) (CBSGS) / 53301 - Design of Mechanical Systems

Time: 3 Hours Marks: 80

•	Question	Nο	1	is	compulsory	7
•	Oueshon	INO.	1	19	COMPUISON	٠.

- Attempt any three questions from the remaining.
- Assumption made should be clearly stated.
- Design Data Book by PSG, Mahadevan, Kale & Khandare are permitted to use.

Q.1 **Answer any four**

	(a)	State the importance of Ray Diagram in the design of multi speed gear box.	5
	(b)	Describe the significance of the pulleys for a gain in force and pulleys for a gain in speed.	5
	(c)	State the importance of the take up arrangements in the belt conveyor system, also explain the gravity take up unit with neat sketch.	5
	(d)	Draw a flow chart for the morphology of design and explain each phase.	5
	(e)	Describe the terms NPSH required and NPSH available associated with centrifugal pump design.	5
Q.2		It is required to design a 2 X 3 multi speed gear box for a lathe machine operation with following specification.	
		$N_{min} = 120 \text{ rpm}, N_{motor} = 1500 \text{ rpm}, GP \text{ ratio} = 1.41$	
	a)	Write structural formulae and draw structural diagrams,	5
	b)	Draw ray diagram and speed chart	5
	c)	Find the number of teeth of each gear.	5
	d)	Draw the deviation chart.	5
Q.3		A single cylinder, two stroke, and water cooled diesel engine is required to develop 20KW at a speed of 1500rpm. Assume the compression ratio as 12.	
	a)	Find the standard bore and length of a cylinder.	4
	b)	Estimate the cylinder liner thickness also check for pressure and thermal criteria.	4
	c)	Estimate the cylinder head dimensions and water jacket thickness.	4
	d)	Select suitable size and number of bolts for the cylinder head.	4
	e)	Estimate the crown thickness of the piston.	4

e Lifted - 15 tonne speed - 5 m/min n Lift - 6 m 6 X 37 type of rope and find its life in months. itable standard sheave and design axle. itable hook and check at critical cross section. andard thrust bearing for the hook. n expression for the breaking strength of 6 X 7 type of rope used in hoisting on. veyor system is to be designed for the following specifications: conveyed up: Coal : 200 TPH al distance: 30m	5 5 8 2
speed - 5 m/min m Lift - 6 m 6 X 37 type of rope and find its life in months. itable standard sheave and design axle. itable hook and check at critical cross section. andard thrust bearing for the hook. The expression for the breaking strength of 6 X 7 type of rope used in hoisting on. The expression is to be designed for the following specifications: conveyed up: Coal : 200 TPH	5 8 2
m Lift - 6 m 6 X 37 type of rope and find its life in months. itable standard sheave and design axle. itable hook and check at critical cross section. andard thrust bearing for the hook. n expression for the breaking strength of 6 X 7 type of rope used in hoisting on. veyor system is to be designed for the following specifications: conveyed up: Coal : 200 TPH	5 8 2
6 X 37 type of rope and find its life in months. itable standard sheave and design axle. itable hook and check at critical cross section. andard thrust bearing for the hook. he expression for the breaking strength of 6 X 7 type of rope used in hoisting on. veyor system is to be designed for the following specifications: conveyed up: Coal : 200 TPH	5 8 2
itable standard sheave and design axle. itable hook and check at critical cross section. Indard thrust bearing for the hook. In expression for the breaking strength of 6 X 7 type of rope used in hoisting for. It is expression for the breaking strength of 6 X 7 type of rope used in hoisting for. It is expression for the breaking strength of 6 X 7 type of rope used in hoisting for. It is expression for the breaking strength of 6 X 7 type of rope used in hoisting for. It is expression for the breaking strength of 6 X 7 type of rope used in hoisting for. It is expression for the breaking strength of 6 X 7 type of rope used in hoisting for. It is expression for the breaking strength of 6 X 7 type of rope used in hoisting for. It is expression for the breaking strength of 6 X 7 type of rope used in hoisting for. It is expression for the breaking strength of 6 X 7 type of rope used in hoisting for. It is expression for the breaking strength of 6 X 7 type of rope used in hoisting for. It is expression for the breaking strength of 6 X 7 type of rope used in hoisting for. It is expression for the breaking strength of 6 X 7 type of rope used in hoisting for. It is expression for the breaking strength of 6 X 7 type of rope used in hoisting for. It is expression for the breaking strength of 6 X 7 type of rope used in hoisting for. It is expression for the breaking strength of 6 X 7 type of rope used in hoisting for. It is expression for the breaking strength of 6 X 7 type of rope used in hoisting for. It is expression for the breaking strength of 6 X 7 type of rope used in hoisting for. It is expression for the breaking strength of 6 X 7 type of rope used in hoisting for the following specifications:	5 8 2
itable hook and check at critical cross section. Indard thrust bearing for the hook. In expression for the breaking strength of 6 X 7 type of rope used in hoisting on. It is a section of the breaking strength of 6 X 7 type of rope used in hoisting on. It is a section of the breaking strength of 6 X 7 type of rope used in hoisting on. It is a section of the breaking strength of 6 X 7 type of rope used in hoisting on. It is a section of the breaking strength of 6 X 7 type of rope used in hoisting on. It is a section of the breaking strength of 6 X 7 type of rope used in hoisting on. It is a section of the breaking strength of 6 X 7 type of rope used in hoisting on. It is a section of the breaking strength of 6 X 7 type of rope used in hoisting on. It is a section of the breaking strength of 6 X 7 type of rope used in hoisting on. It is a section of the breaking strength of 6 X 7 type of rope used in hoisting on. It is a section of the breaking strength of 6 X 7 type of rope used in hoisting on. It is a section of the breaking strength of 6 X 7 type of rope used in hoisting on. It is a section of the breaking strength of 6 X 7 type of rope used in hoisting on.	8 2 5
n expression for the breaking strength of 6 X 7 type of rope used in hoisting on. veyor system is to be designed for the following specifications: conveyed up: Coal : 200 TPH	2 5
n expression for the breaking strength of 6 X 7 type of rope used in hoisting on. veyor system is to be designed for the following specifications: conveyed up: Coal : 200 TPH	5
n expression for the breaking strength of 6 X 7 type of rope used in hoisting on. veyor system is to be designed for the following specifications: conveyed up: Coal : 200 TPH	5
on. veyor system is to be designed for the following specifications: conveyed up : Coal : 200 TPH	
veyor system is to be designed for the following specifications: conveyed up : Coal : 200 TPH	15
distance:5m g angle: 20 degree te the width of the belt based on capacity.	
ate the motor power.	
he number of ply in the belt cross section.	
causes and remedies for the vibration and noise in centrifugal pump.	5
the working of the external gear pump with neat sketches.	5
y of the gear pump is 80%. suitable standard motor.	10
	ate the motor power. the number of ply in the belt cross section. causes and remedies for the vibration and noise in centrifugal pump. the working of the external gear pump with neat sketches. Pump required to deliver 25LPM of SAE20 oil at a pressure of 25 bar. by of the gear pump is 80%. suitable standard motor. in gear and check for bending failure.
