15-May-18 11:00 am - 02:00 pm T8232 M. E. (Mechanical with Machine Design) (Sem. - II) (Choice Base) / T90 System Modeling & Analysis.

Q.P. Code: 40741

(3 HOURS)

TOTAL MARKS: 80

N.B.:

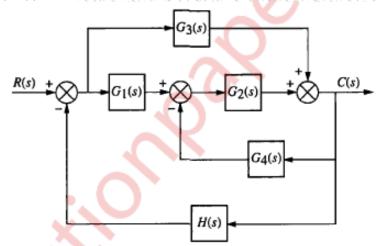

- (1) Attempt any **four** questions.
- (2) Assumptions made should be **clearly** stated.
- (3) Use log/semi-log paper is permitted.
- Q.1) (a) The characteristic equation of a system is given by

(10)

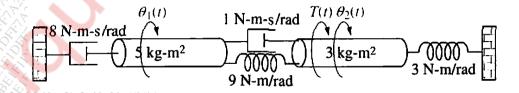

$$s^6 + 3s^5 + 5s^4 + 9s^3 + 8s^2 + 6s + 4 = 0$$

Comment on stability of the system using Routh's rule.

- (b) Define and explain with the help of neat diagram, specifications of transient (10) response, such as delay time, rise time, peak time, maximum overshoot and settling time.
- Q.2) (a) Simplify the block diagram shown in Figure below and obtain the closed-loop transfer function C(s)/R(s). (10)

(b) Write the differential equations governing the mechanical rotational system (10) shown in figure and determine possible transfer functions. Moment of inertia of rotors are 5 kg m<sup>2</sup> and 3 kg m<sup>2</sup>.

Q.3) (a) In case of the closed loop system whose transfer function is,

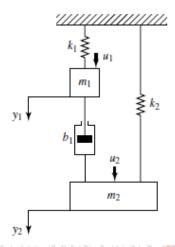

$$\frac{G(S)}{R(S)} = \frac{K}{JS^2 + KpS + K} \tag{10}$$

Determine the values of K and p for the 25% maximum overshoot in unit step response and the peak time is 2 sec. Assume  $J = 1 \text{ Kg-m}^2$ .

(10)

(10)

(b) Obtain a state-space representation of the mechanical system shown in figure (10) below, where  $u_1$  and  $u_2$  are the inputs and  $y_1$  and  $y_2$  are the outputs.

Q.4) (a) Find the transfer function for the following systems represented in state space. (10)

$$[\dot{x}] = \begin{bmatrix} 2 & -3 & -8 \\ 0 & 5 & 3 \\ -3 & -5 & -4 \end{bmatrix} [x] + \begin{bmatrix} 1 \\ 4 \\ 6 \end{bmatrix} [u]$$

$$[y] = [1 \ 3 \ 6][x]$$

(b) Sketch the root locus for an open loop transfer function of a control system.

$$G(s)H(s) = \frac{k}{s(s+4)(s^2+4s+10)}$$

Q.5) (a) Sketch the bode plot and determine the gain margin, phase margin, gain crossover (10) frequency and phase crossover frequency for the transfer function.

$$G(s) = \frac{75(1+0.2s)}{s(s^2+16s+100)}$$

- (b) For a certain control system  $G(s)H(s) = \frac{10}{s(s+6)(s-4)}$ . Sketch the Nyquist plot and discuss the stabilty of given system. (10)
- Q.6) (a) Linearize the nonlinear equation

$$z = x^2 + 4xy + 6y^2$$

in the region  $8 \le x \le 10$ ,  $2 \le y \le 4$ . Find the error if the linearized equation is used to calculate the value of z when x = 9 and y = 4.

- (b) (i) Explain Lyapunov stability theory and common nonlinearities in control (05) systems.
  - (ii) Distinguish between Transfer function and state space representation (05)
