

(3 Hours)

[Total Marks : 80

- N. B. : (1) Question 1 is compulsory.
 (2) Solve any three questions from remaining five questions.
 (3) Figures to the right indicate full marks.
 (4) Assume suitable data if necessary.

1. Attempt the following

20

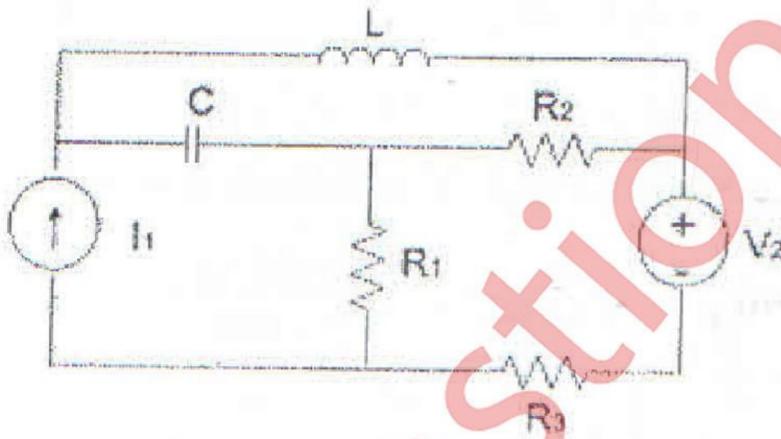

- (a) Find the condition of symmetry for Z parameters.
 (b) What is network synthesis. Construct the circuit for

$$Z(s) = 4s + \frac{9}{s} + \frac{15s}{s^2 + 4}$$

- (c) Derive the s- domain equivalent for inductor with initial current I_0 and capacitor with initial voltage V_0 .
 (d) Express Y parameters of two port network in terms of two port currents and voltages.

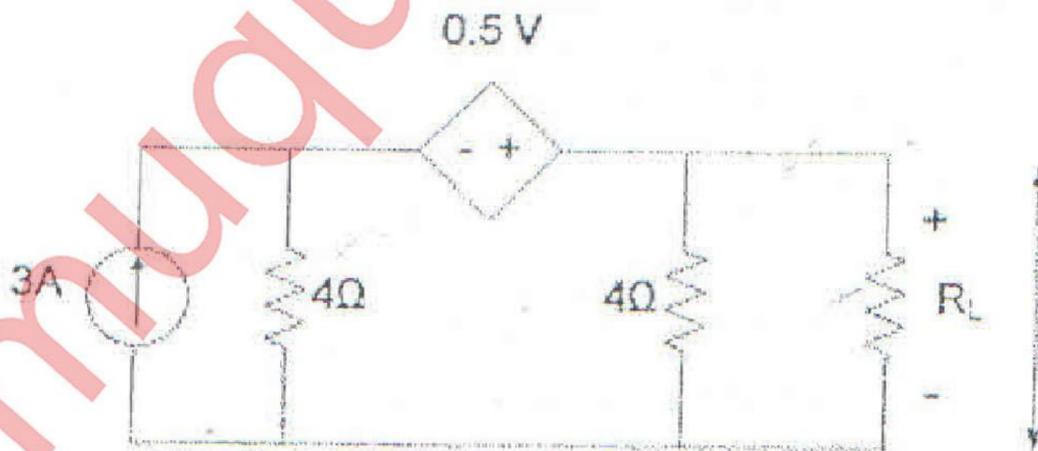

2. (a) For the given network draw an oriented graph and write f-cutset and f-tieset matrix.

10

- (b) What will be the value of R_L to get maximum power delivered to it. What is value of this power.

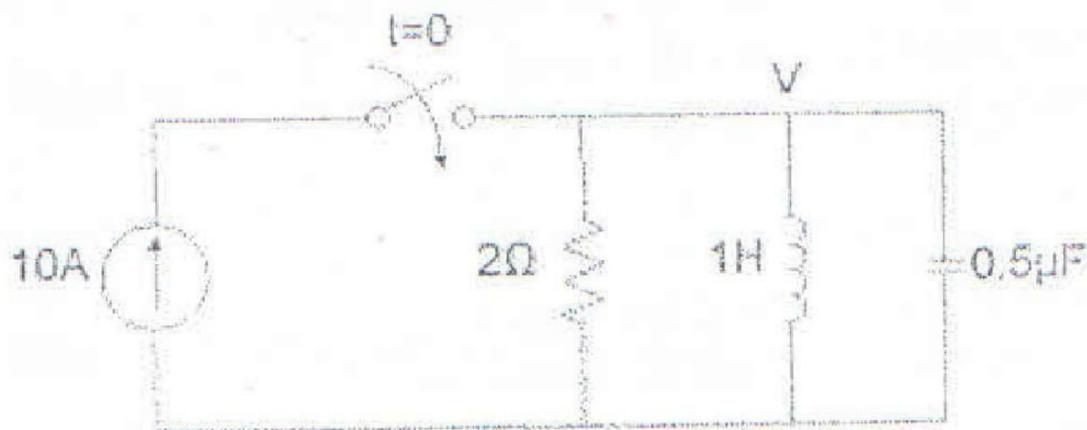

10

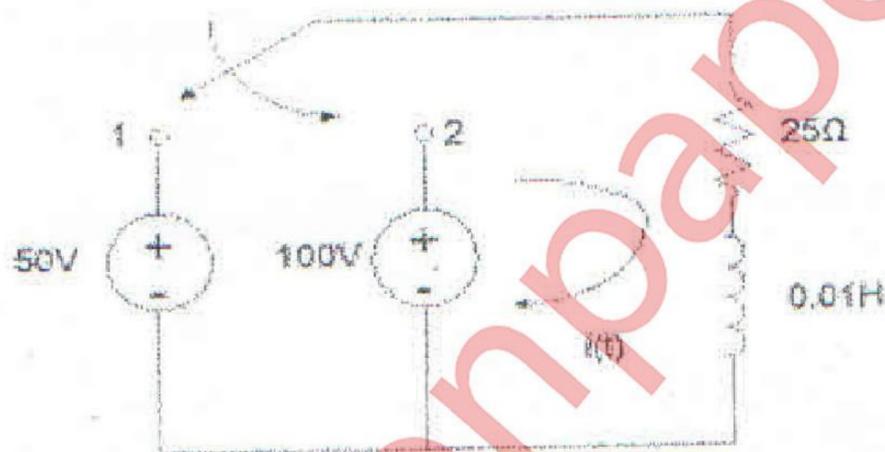

[TURN OVER

3. (a) For the network shown in figure, switch is closed at $t=0$, determine 10

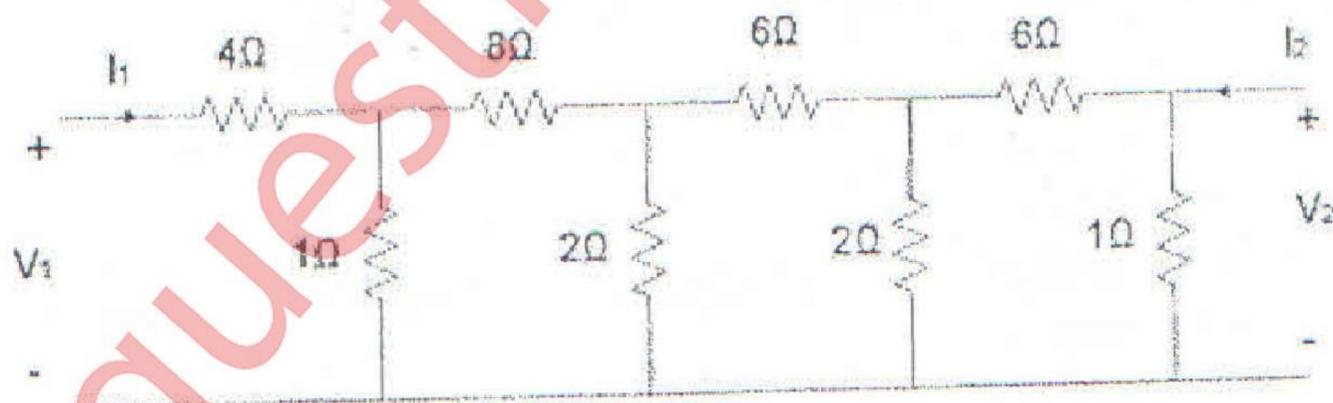

$$v, \frac{dv}{dt}, \frac{d^2v}{dt^2} \text{ at } t = 0^+$$

(b) In the RL circuit shown, switch is in position 1 long enough to establish steady state condition. At $t=0$, switch is changed to position 2. Find $i(t)$ 10

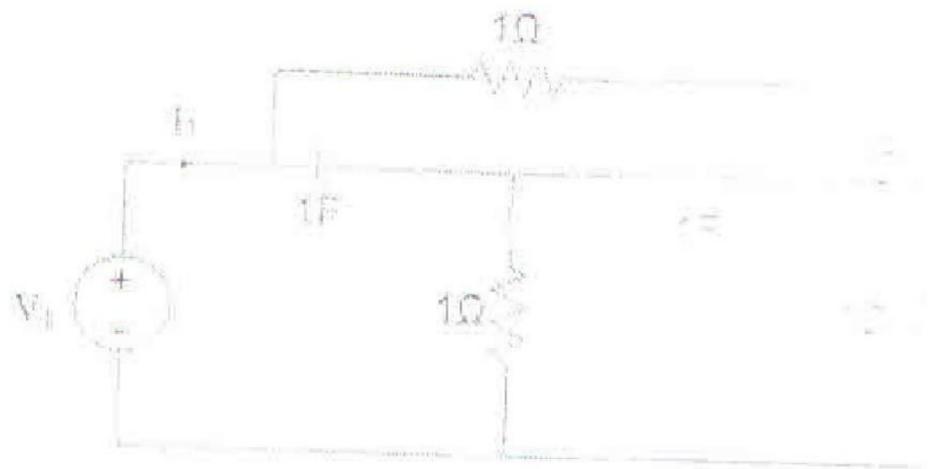

4. (a) Find A, B, C, D parameters for the network 10

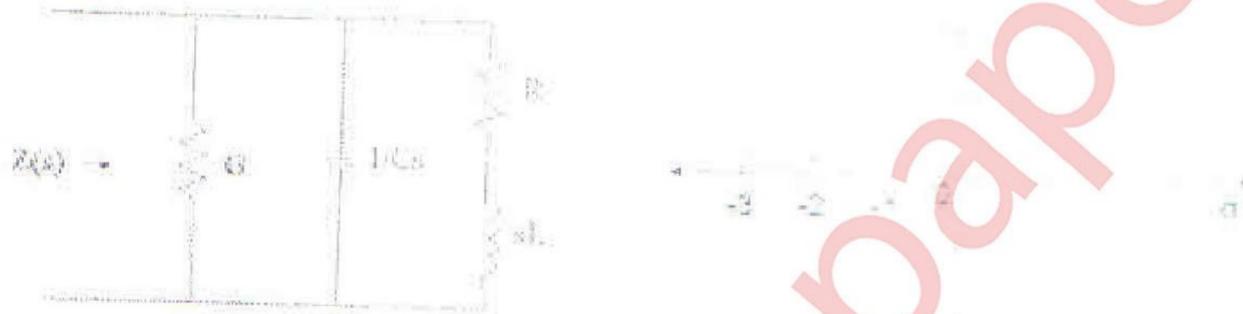

[TURN OVER

- (b) Find the driving point admittance Y_{11} and transfer admittance Y_{12} 10

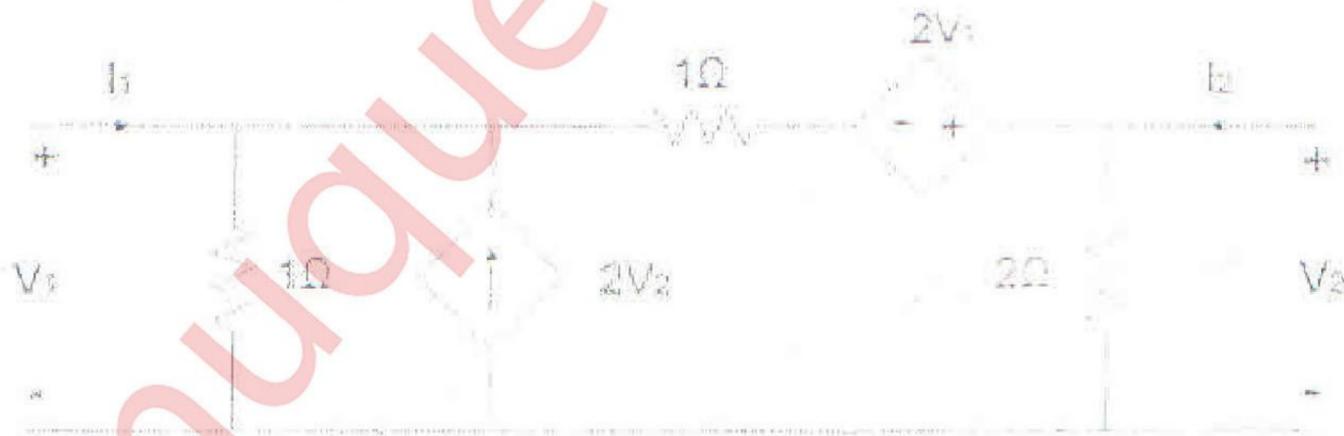

5. (a) A network and pole zero diagram for a RC one-port impedance $Z(s)$ are shown in figures. Calculate the values of the parameters R , C , G and C if $Z(j0)=1$. 10

- (b) Synthesize the following function by Foster I and Cauer I form 10

$$Z(s) = \frac{(s+1)(s+4)}{s(s+2)}$$

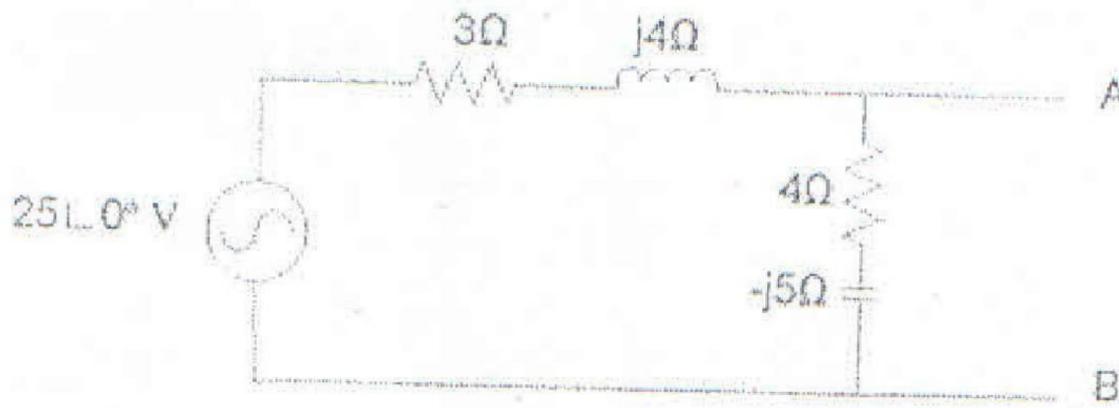

6. (a) Write the mesh equation for the circuit. Find Y and Z parameters. 10

[TURN OVER]

- (b) Find the Norton's equivalent across A-B in the figure shown.

5

- (c) Write the mesh equations for circuit

5
