

(2 ½ Hours)

[Total Marks: 75]

N.B: (1) All questions are compulsory.

(2) Figures to the right indicate marks.

(3) Illustrations, in-depth answers and diagrams will be appreciated.

(4) Mixing of sub-questions is not allowed.

Q1.

Attempt the following (any THREE):

- (A) What are the different myths and realities about software?
- (B) Give the various application areas of software.
- (C) Discuss the characteristics of software.
- (D) Give the basic phases in the software-development life-cycle.
- (E) Explain the waterfall model in detail with the help of a diagram. State its advantages and also its limitations.
- (F) What are the major advantages of first constructing a working prototype before developing the actual product?

Q2.

Attempt the following (any THREE):

- (A) What is requirements elicitation? Discuss any two techniques in detail.
- (B) Define:
 - (i) Data-flow diagram (ii) Decision table
- (C) Draw the E-R diagram for a hotel reception desk management.
- (D) What is software quality assurance?
- (E) Briefly explain principles of Agile development.
- (F) Explain, in detail, the SEI-CMM model.

Q3.

Attempt the following (any THREE):

(15)

- (A) Discuss the term verification in reference to system design.
- (B) Compute the function-point value for a project with the following Information-domain characteristics.

Number of user Inputs: 32

Number of User output: 60

Number of User Inquiries: 24

Number of files: 8

Number of external interface: 2

Assume that all complexity adjustment values are average.

- (C) Define architectural design. What are the objectives of architectural design?
- (D) Define:
 - (a) Product metrics (b) Process metrics (c) Project metrics
- (E) Define the various principles of testing.
- (F) What is the difference between black-box testing and white-box testing?

TURN OVER

(15)

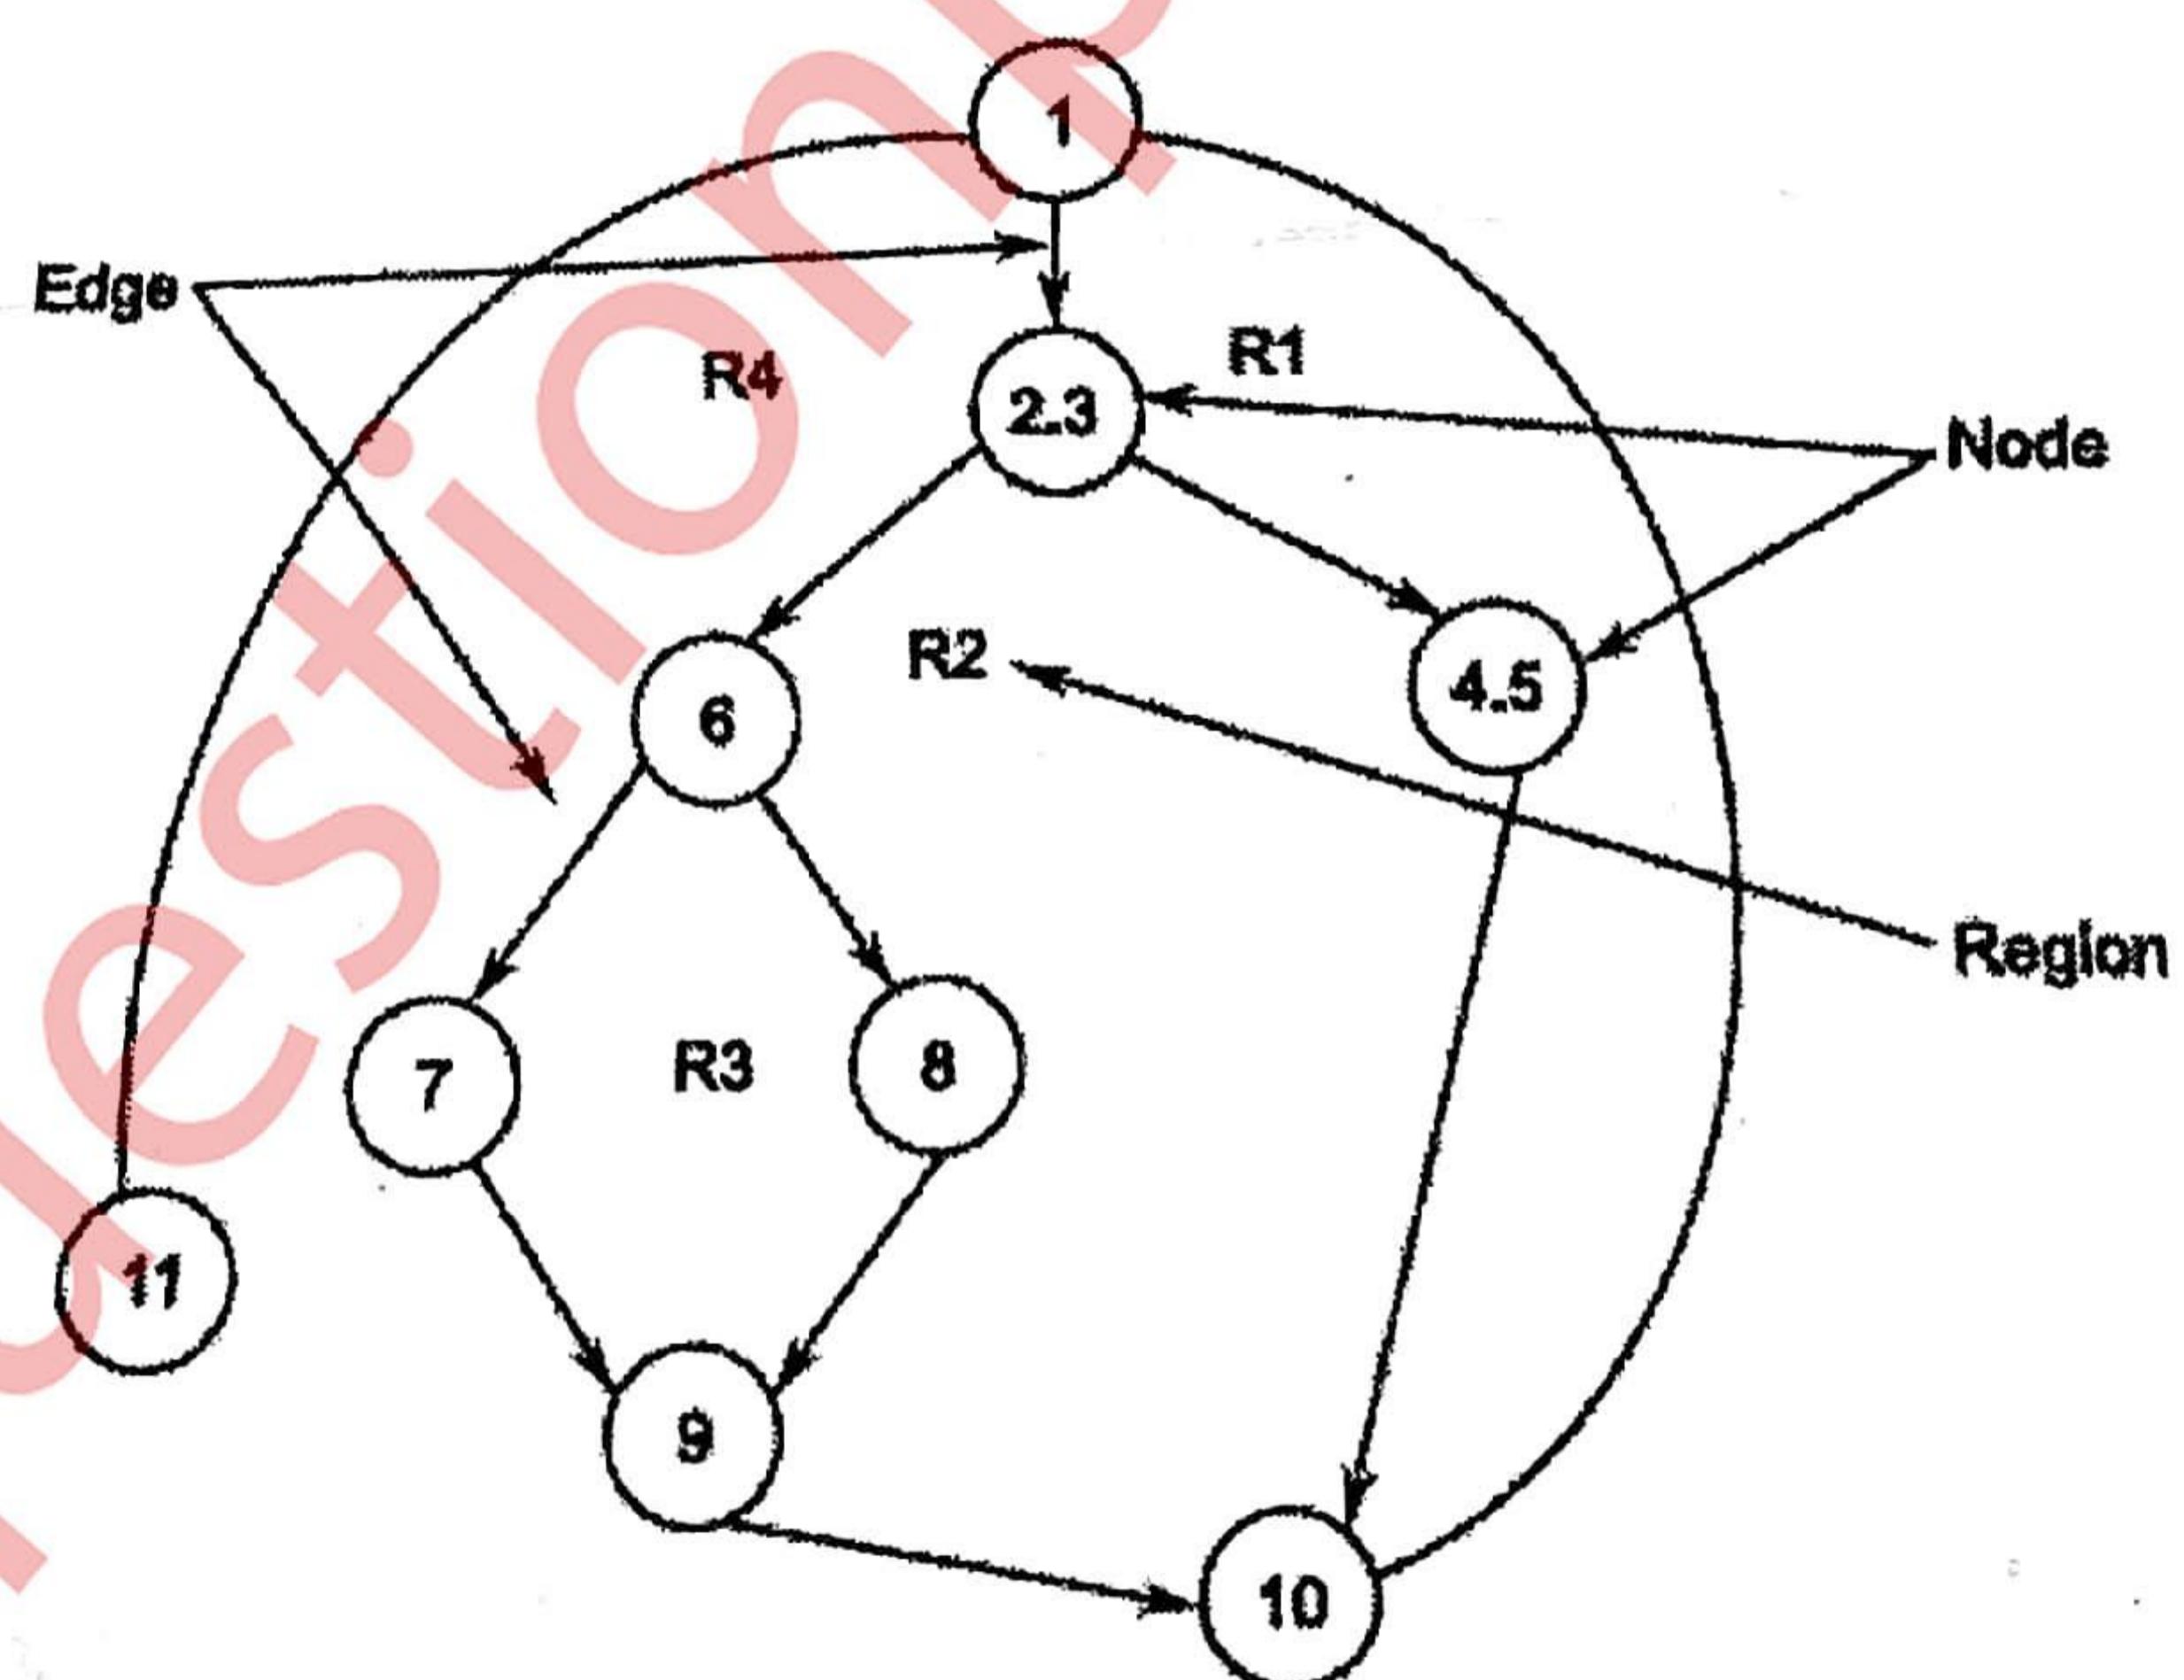

Q4. Attempt the following (any THREE):

- (A) Explain in brief the various static testing strategies.
- (B) Explain Computer-Aided Software Engineering (CASE) and the various types of CASE tools.
- (C) Define reverse engineering. Discuss the levels of reverse engineering.
- (D) Describe the various programming styles in software engineering.
- (E) What are the advantages of writing structured programs versus unstructured programs?
- (F) Explain Terms Error, Fault, Failure, Bug, and Crash. Explain how they are related with each other.

(15)

Q5. Attempt the following (any THREE):

- (A) What is a software crisis? Explain the problems of a software crisis.
- (B) Write a short description of the evolutionary development model. Also state its advantages.
- (C) What is an SRS? What are the components of an SRS?
- (D) What is a DFD? Explain some of the symbols used to draw a DFD.
- (E) A set of independent paths for the flow graph illustrated in Figure is

Compute Cyclomatic complexity.

- (E) What is a fourth-generation language? How does it differ from a third-generation language?
