## Paper / Subject Code: 89426 / Tool Engineering (DLOC)

1T01436 - T.E.(Mechanical Engineering)(SEM-VI)(Choice Base Credit Grading System ) ((R- 19) (C Scheme) / 89426 - Tool Engineering (DLOC)

QP CODE: 10042794

DATE: 20/12/2023

Duration: 3hrs [Max Marks: 80]

- **N.B.** (1) All questions carry equal marks.
  - (2) Question No. 1 is Compulsory.
  - (3) Attempt any three questions from remaining five questions
  - (4) Figures to the right indicate full marks.
  - (5) Draw neat sketches wherever necessary.

## Que. 1 Attempt any four of the following:

(20

- A. Explain the difference between orthogonal and oblique cutting.
- B. Explain crater wear and flank wear.
- C. Sketch and discuss a typical internal broach.
- D. Explain Strain gauge type dynamometer.
- E. Explain MRS and ORS.
- F. Write short note on: Polycrystalline diamond (PCD).
- Que. 2. A. Explain the procedure to draw Merchant force circle with some advantages and limitations. (10)
  - B. Compare adhesive and abrasive wear with neat sketches. (10)
- Que. 3 A. Compare CVD and PVD.
- (10)
  - B. State and briefly explain various methods to measure cutting temperature. (10)
- Que. 4 A. Explain design considerations for design of Tap. (10)
  - B. Explain the various components of cost of machining a work piece which are included in product cost. (10)
- Que.5 A. Discuss the influence of various tool angles in tool signature on tool design. (10)
  - B. Explain the constructional features of tipped tool and flat form tool. (10)
- Que.6 A. Determine the shear plane angle, cutting force component and resultant force on the tool for orthogonal cutting operation of material with yield stress of 250 N/mm<sup>2</sup>. Following are the machining parameters.

Tool rake angle =  $20^{\circ}$ , Uncut chip thickness = 0.30 mm, Chip width = 3mm Chip thickness ratio = 0.50 & Angle of friction =  $42^{\circ}$ 

B. Enlist the surface finish measurement technique and explain any one in detail. (10)
