Q.2 A Ramkrishna Manufacturing is considering a proposal for investment. The details available are as follows.

| Cost of equipment | 6,00,000 |
|---|----------|
| Installation charges | 1,00,000 |
| Realizable value at the end of its life | 50,000 |
| Working capital required | 40,000 |
| Tax applicable | 30% |

The annual cash flow and PV Factor @12% are

| Year | PV Factor @ | Inflow before depreciation and tax | | |
|------|-------------|------------------------------------|--|--|
| क्षे | 12% | (Rs.) | | |
| 1 | 0.893 | 1,80,000 | | |
| 2 | 0.797 | 2,00,000 | | |
| 3 | 0.712 | 2,40,000 | | |
| 4 | 0.636 | 2,50,000 | | |
| 5 | 0.567 | 2,20,000 | | |
| 6 | 0.507 | 2,00,000 | | |

Depreciation is chargeable @ 20%-under Straight line method. Evaluate the proposal under Net Present Value method.

Q.2 B Gurudatta Enterprises is in the process of expansion of its manufacturing capacity.

For this purpose, it is comparing between two mutually exclusive proposals

Machine P & Q. The information available is as follows.

| Particulars | Machine P | Machine Q |
|---|-----------|-----------|
| Cost (Rs.) | 10,00,000 | 12,00,000 |
| Working capital (Rs.) | 1,00,000 | 1,50,000 |
| Realisable value at the end of useful life. | 50,000 | 2,00,000 |
| (Rs.) | 5 | |
| Inflow after tax before depreciation (Rs.) | 3,50,000 | 3,00,000 |
| Estimated life | 6 years | 6 years |

Advice the management in finalization of the proposal using Net present value method. Present value factor @ 9% is

| Year | . 1 | 5 2 | 3 | 4 | 5 | 6 |
|--------|-------|-------|-------|-------|-------|-------|
| PV | 7 | 7, | | | | |
| Factor | 0.917 | 0.842 | 0.772 | 0.708 | 0.650 | 0.596 |

DBJ Ltd has average annual turnover of Rs. 12,00,000 and average collection Q.3 period of 30 days. The company wants to experiment with different credit policies to improve the profitability. From the following information, suggest the suitable policy to increase the profit level of the company.

| | Sales (Rs.) | Credit allowed | Bad debts % |
|-------------------|-------------|----------------|-------------|
| Present policy | 12,00,000 | 30 Days | 2% |
| Credit Policy I | 16,00,000 | 45 Days | 3% |
| Credit Policy II | 21,00,000 | 60 Days | 5% |
| Credit Policy III | 30,00,000 | 90 Days | 10% |

Required rate of return on investment is 25% (considering debtors at selling price). Selling price per unit is Rs.50 and variable cost is 70% of selling price. Assume 360 days a year for calculation purpose.

B Annual consumption 40,000 units @ Rs.10 per unit. Cost of placing an order Rs.120 Cost of processing an order Rs.130 Cost of storage per unit per annum 50% of cost of material Calculate EOQ using formula and table method considering order size of 40,000 units, 20,000 units, 8,000 units, 5,000 units and 2,000 units.

Choose the correct alternative and fill in the blanks

Internal Rate of Return is the rate of interest at which

- i. Net Present Value is maximum
 - ii. Net Present Value is zero
 - iii. Pay back period is zero
 - iv. Pay back period is minimum
- Inflow before tax is Rs. 80,000. Tax rate is 30%. Inflow after tax
 - i. Rs. 24,000
 - ii. Rs.1,04,000
 - iii.Rs. 56,000
 - iv. Rs. 80,000
- Increase in credit period from creditors will result in
 - i. Increase in working capital
 - ii. Increase in inventory
 - iii. Decrease in working capital requirement
 - iv. Decrease in inventory
- is suitable source of finance for working capital requirements.
 - Issue of debentures
 - ii. Issue of preference shares
 - iii. Bank overdraft
 - iv. Mortgage loan
